Flight Path Study - United Airlines Flight 93  

A.  SUBJECT AIRCRAFT  
   Location: Shanksville, PA  
   Date: September 11, 2001  
   Time: 10:03 AM Eastern Daylight Time  
   Flight: United Airlines Flight 93  
   Aircraft: Boeing 757-200, registration: N591UA  
   NTSB#: DCA01MA065  

B. GROUP  
   N/A  

C. SUMMARY  
This document provides a brief description of the flight path of the aircraft based on information obtained from various sources of recorded radar of the subject aircraft both before and after the hijacking events. Information from the Flight Data Recorder (FDR) recovered on scene is also used to develop the description. Flight paths are overlaid onto maps of the area, and time histories of altitude data are presented.  

United Airlines Flight 93 – Flight Profile  
The following profile of United Airlines Flight 93 is based on data from the flight data recorder (FDR) recovered from the crash site, as well as radar data obtained from the Federal Aviation Administration’s Air Route Traffic Control Centers and the U.S. Air Force 84th Radar Evaluation Squadron.  

Figure 1 shows the flight path of the aircraft from take off at Newark, NJ to the crash site near Johnstown, PA. Figure 2 shows the aircraft’s altitude profile for the 1 hour and 21 minute duration of the flight.
United flight 93 departed Newark, NJ at 8:42 am (point A in Figures 1 and 2) and reached its assigned cruising altitude of 35,000 feet at about 9:02 am (B). The flight appears normal until a brief descent of about 600 feet starting at 9:28 (C). The words “get out of here” and sounds of a struggle were recorded on the air traffic control radio at FAA’s Cleveland Center facility at this time. The Cockpit Voice Recorder (CVR) onboard the airplane began providing sounds from the cockpit at approximately 9:32. At 9:34 (D) the airplane starts to climb from 35,000 feet, and shortly thereafter begins a left turn to a Southeast heading of 120° with the autopilot in heading select mode. The airplane maintained a maximum altitude of 41,000 feet for about 2 minutes and then started descending at about 9:39 (E), with the autopilot in vertical speed mode and at a descent rate of 4,000 feet/minute. Radar stations stopped receiving transponder returns from UAL93 at approximately 9:41.

There was a brief interruption in the descent at 9:46 (F) as the airplane climbed from 19,000 feet to 20,500 feet before resuming its descent, but at a slower rate (1,300 feet/minute). At about 9:57 the airplane started a left turn to the east. At 9:59 (G) the airplane was at 5,000 feet when about 2 minutes of rapid, full left and right control wheel inputs resulted in multiple 30 degree rolls to the left and right. From approximately 10:00 to 10:02 there were four distinct control column inputs that caused the airplane to pitch nose-up (climb) and nose-down (dive) aggressively. During this time the airplane climbed to about 10,000 feet while turning to the right. The airplane then pitched nose-down and rolled to the right in response to flight control inputs, and impacted the ground at about 490 knots (563 mph) in a 40 degree nose-down, inverted attitude. The time of impact was 10:03:11.

Figure 2. UA-93 Altitude Profile

A - UAL 93 takes off from Newark, NJ at 0842 EDT.
B - UAL 93 levels off at assigned altitude of 35,000 ft.
C - 600 foot deviation from assigned altitude (assumed takeover point.)
D - Starts climb to 41,000 feet, then turns towards Southeast.
E - At max altitude of 41,000 feet; xponder returns cease 2 min. later.
F - Brief interruption in descent.
G - Rapid control wheel inputs; aircraft starts climbing.
H - Aircraft noses down and starts rapid descent.
I - Aircraft impacts the ground inverted and at high speed.
